

IN THE CLAIMS

Replacement claims:

1. A vehicle lift comprising:
- a) a pair of spaced-apart ramps;
 - b) at least two cross members attached to and supporting the pair of spaced-apart ramps, each of the at least two cross members further having at least two opposed end blocks and at least one pulley attached to each end block;
 - c) four spaced-apart U-shaped columns, each of the U-shaped columns having a base, a top cap, located opposite the base, and a cross member receiver slot wherein the end blocks on the cross members are slidingly received in the slot;
 - d) a hydraulic cylinder; and,
 - e) a plurality of cables, each cable fixed at one end substantially in the center of the top cap of one of the U-shaped columns and the opposite end to the hydraulic cylinder, so that when the hydraulic cylinder is actuated, upward and downward movement of the cross members and the spaced-apart ramps occurs.
-

9 A vehicle lift, comprising:

- a) four spaced-apart U-shaped columns, each having a base and a top cap;
- b) a pair of ramps;
- c) at least two cross members supporting the pair of ramps, each of the at least two cross members having opposing ends slidably received and held within a cross member receiver slot in one of the four spaced-apart U-shaped columns;
- d) a hydraulic cylinder;
- e) at least one cable having a securing end fastened substantially at the center position of the top cap of one of the four spaced-apart U-shaped columns and further having a pulling end attached to the hydraulic cylinder; and

a2 wherein the at least one cable is maintained within the U-shaped column and is routed through a pulley on the end of one of the at least two cross members received within the U-shaped column, such that when operated, the hydraulic cylinder pulls said at least one cable through the pulley thereby raising the at least two cross members and the pair of ramps.
